

EZ-TRAC[™]

Visibility, control, savings

- Save time, eliminate manual data entry, and reduce paperwork with tools such as digital proof of delivery
- Optimize inventory usage and forecasting across your sites with detailed reporting
- Simplify order and invoice processing with accurate and easy reconciliation
- Improve quality and safety with real-time expiration dates, cylinder quantities and available gas content

Easily track and manage all of the products you need, right on your site

Supply chain solutions from Airgas, an Air Liquide company, provide multiple levels of services designed to help you realize significant savings. As part of your daily supply chain management solution, EZ-TRAC is the gateway to improved management of your physical inventory. Using barcode technology, you can quickly and accurately track and audit cylinders, equipment and hardgoods, right on your jobsite.

EZ-TRAC™

Visibility, control, savings

Precise management of gases, welding and safety equipment is necessary to keep costs in line and your project safely moving forward. As part of our supply chain solutions, EZ-TRAC technology transfers and tracks inventory data quickly and accurately using mobile handheld devices. This system helps reduce errors that occur with manual data entry—your data is automatically transferred into your Airgas.com account and is ready whenever you need it.

.....

Digital proof of delivery eliminates manual data entry and time-consuming paperwork – automatic notifications are available and accessible anytime via email or on Airgas.com

.....

.....

Tracking your assets by serial number is available for increased visibility and forecasting

.....

.....

Tracking your assets on-site (either by your own team or Airgas) is also available to effectively manage gases and hardgoods inventory

.....

.....

Access detailed reporting options on Airgas.com including usage, cylinder inventory, cylinder rental allocation, and cylinders with expiring shelf life
