

Airgas®

an Air Liquide company

Total Gas Management™

Custom, on-site gas solutions for visibility,
control and savings

- Ensure protection, maintain compliance and minimize risk for your team
- Get more time to focus on your core activities instead of gases and equipment
- Manage your budget efficiently and lower your Total Cost of Ownership (TCO)

Sometimes our supply chain challenges require more

Efficiencies can certainly be lost in the time-consuming management of gases, products and services needed to keep production on schedule. When your team is focused on maintaining processes and meeting deadlines, there is little time to efficiently and safely manage the gases and equipment that are vital to your process.

Total Gas Management, part of the supply chain solutions offer from Airgas, an Air Liquide company, is designed to help you realize cost control and continuous improvement across your entire organization. This service level offers a customized tool set of services and a dedicated Airgas technician, right on your site.

Improve your daily operations now

Customized supply chain solutions from Airgas

A variety of service levels designed to help you:

- Gain visibility into your supply chain
- Control your gas inventory
- Save both time and money with the efficiencies you choose to implement

Total Gas Management™ is a custom solutions package that is built specifically for you, with all of the tools you need selected from all supply chain solutions service levels including order, inventory and operations management.

Customized supply chain solutions from Airgas

An Airgas technician, right on your site

TOTAL GAS MANAGEMENT

An Airgas technician, right on your site

Total Gas Management goes a step further and includes a dedicated Airgas technician to implement supply chain efficiencies and manage your gases, right on your site.

Our highly-skilled technicians are ready to help:

- Manage your daily tasks including gas supply orders
- Manage your gas usage including point-of-use stocking, storage, product content, and changeout services with enhanced technologies like EZ-TRAC™ and EZ-GAZ™
- Maintain documentation to ensure traceability and compliance
- Connect gases to the point of use and related equipment installations
- Perform onsite product transfers, including liquid nitrogen transfills

With an on-site Airgas technician, you now have direct daily access to gas safety and technical expertise for your team, as well as additional quality control support needed to safely manage gases and equipment.

Focus on your core business instead

It's easy when you let Total Gas Management from Airgas manage your supply chain.

Worry-free and reliable supply chain

Improve safety and compliance to regulatory requirements

Improve quality with direct daily access to an expert

Performance and process improvements that translate into savings

“Total Gas Management allows you to focus on your core competencies while we manage all aspects of your gas supply chain needs.”
